

The world's best air filter...made by K&N
 K&N developed and manufactures the only air filtration system of its kind ... a high-flow, washable filter that's been proven, again and again, to be the finest in the world. Professional racers and mechanics worldwide rely on K&N air filters to protect their expensive engines... and so should you!

Stock Replacement Air Filter Elements

For all Street Legal Motorcycles

K&N Replacement Air Filters are designed to fit right into the standard OEM airbox. No modifications are required by the owner, no jet changes or adjustment of the carburetors is anticipated or suggested. Customer modification of the standard airbox - removing the cover, drilling holes into the side or top, will have a drastic effect on smooth carburetion. Modifications will cause the stock system to run lean and reduce horsepower. Keep your motorcycle stock and the new K&N Replacement Element will be good for the life of the engine.

For all Off-Road Dirt Bikes and ATV's

K&N Replacement Air Filters are ideal for extended use in dirty and dusty off-road riding and provide clean carburetion even at high altitude. As a rule, no jet changes are required with just a K&N filter element, however the spark plug condition should be checked for proper mixture after the first few miles of riding. If the airbox has been modified for increased air flow, the main jet size will need to be increased to provide the proper fuel mixture.

SERVICE HINT: Do not clean the K&N air filter too often. When a drop in performance is noticed, or the machine becomes hard to start, it is time to service the filter element. The dirt build-up actually helps stop more dirt and does not hinder the airflow.

Custom/Universal Air Filters

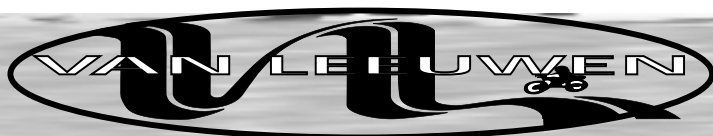

Designed to replace the stock air box for increased flow, K&N

Custom/Universal air filters are designed and manufactured for a wide variety of applications. Regardless of the angle, offset, or diameter of the air intake, there is probably a K&N Universal air filter available for your equipment.

All filters are constructed with ultra-strong molded pliable rubber flanges which absorb vibration and allow for secure attachment, and can also be stretched up to 1/16" (1.5mm) to fit in-between sizes. K&N Universal air filters are available in round, tapered and oval designs, for just about any special application.

These filters are legal **ONLY** for racing vehicles. Not applicable, nor intended for use on emission controlled street or highway vehicles.

These filters are not applicable, nor intended for use on aircraft.

Fuel Management Systems

Whether you run a standard motorcycle or a tuned superbike, K&N Intake Performance Kits can provide you with a simple and affordable solution to all your carburetion problems. K&N Intake Performance Kits increase power and smoothness throughout the entire rev range, while maintaining optimum fuel economy. Each kit is put together with full and comprehensive instructions, which show step by step installation and testing procedures to ensure a perfect set-up every time. This is backed by toll-free telephone technical support for K&N customers. Kit installation and and dynamometer testing services are available in many parts of the country.

Stage One Kits

Intended for motorcycles with a stock engine using the stock airbox, K&N air filter and stock pipe. Stage 1 kits are fully adjustable to allow the use of well designed aftermarket pipes and K&N stock replacement air filters. Stage 1 kits are designed to improve throttle response and driveability and in most cases power increases of approximately 5% throughout the entire power range can be achieved.

Stage Two Kits

Intended for motorcycles with a stock or mildly tuned engine using a well designed aftermarket pipe with a modified airbox and a K&N stock replacement air filter. Stage 2 kits are designed for applications where individual air filters cannot be installed and for applications where airbox modification improves the engine's performance. In most cases power increases of approximately 8% can be achieved.

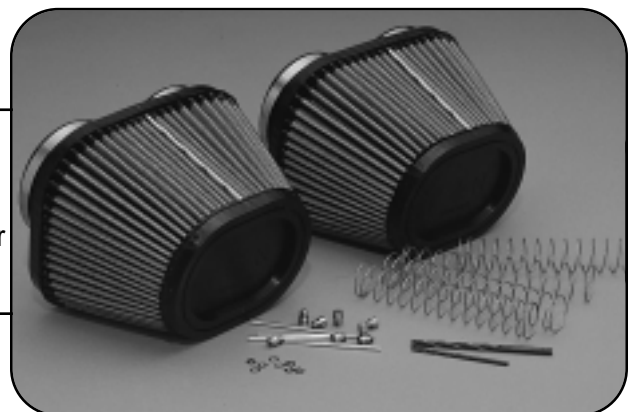

Stage Three Kits

Intended for motorcycles with stock or mildly tuned engines using K&N individual clamp-on air filters and an aftermarket pipe. In most cases power increases of 10 - 15 % can be achieved. However driveability may be compromised particularly with short stroke, high rpm engines. On some modern engine and airbox designs, individual filters and proper jetting offer no performance improvement yet compromise driveability, in such cases Stage 3 kits are not available.

Stage Seven Kits

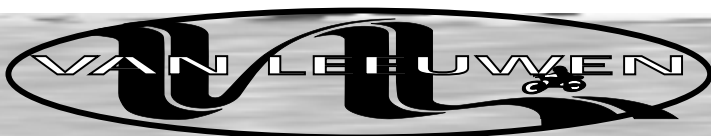

Intended for race only use or special applications, like the Yamaha V Max complete induction kit. Stage 7 kits are designed to optimize jetting for a given tuning specification or racing condition.

These jet kits are legal ONLY for racing vehicles. Not applicable, nor intended for use on emission controlled street or highway vehicles.

These jet kits are not applicable, nor intended for use on aircraft.
